Info <Shct>

Navigation is easy from any symbol in any display to what ever you want to see next.

Database and source code searches find symbols and text strings quickly.

```

void RetrieveSend()
{
    if (subject[subjEffecto:
        if (datatype == FTP_DATA_A) {
            connection.recvSize
            = fread(connection.recvData, 1, FTP_BUFFER_SIZE / 2, fp);
            (FTP_BUFFER_SIZE / 2 > connection.recvSize) {
                byte *cur_r = connection.recvData;
                byte *cur_s = connection.sendData;
                connection.sendSize = connection.recvSize;
    
```

Symbol panel tabs focus on different aspects of the same symbol.
